

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### *Federal NPL site list*

##### **NPL:** National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

##### **Proposed NPL:** Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

##### **NPL LIENS:** Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### ***Federal Delisted NPL site list***

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

### ***Federal CERCLIS list***

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

### ***Federal CERCLIS NFRAP site List***

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### *Federal RCRA non-CORRACTS TSD facilities list*

#### RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

#### RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

#### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### *Local Brownfield lists*

#### US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

### EDR PROPRIETARY RECORDS

#### *EDR Proprietary Records*

### Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

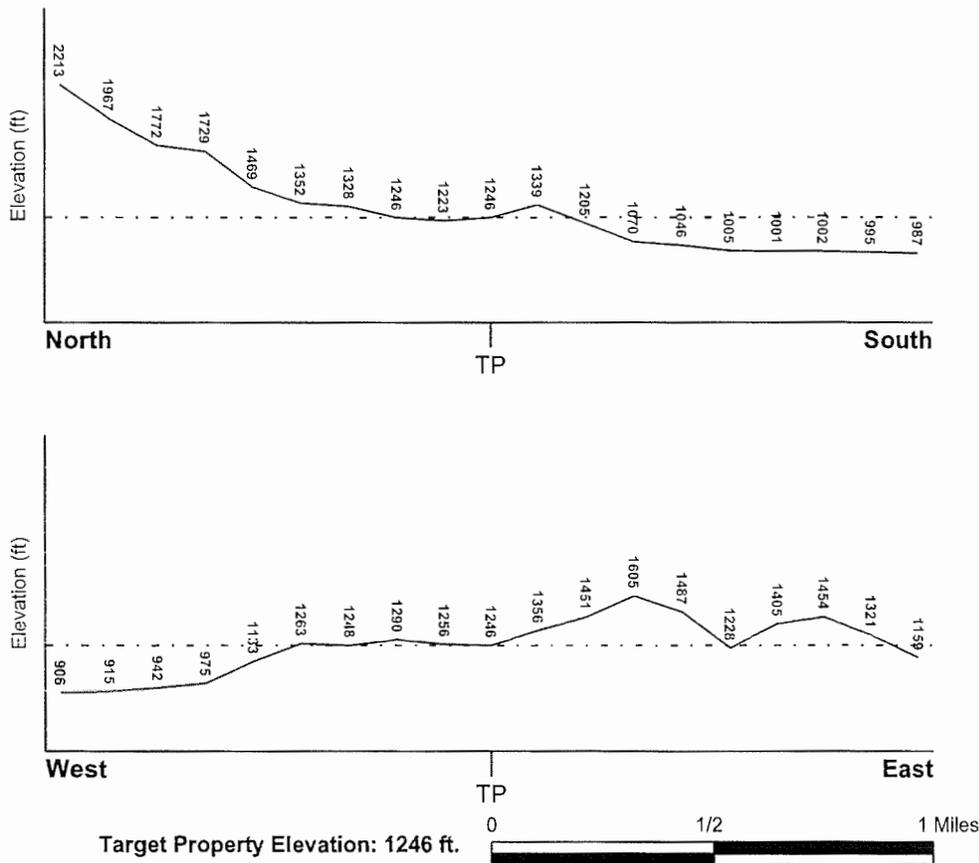

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. ## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

### **INTRODUCTION**

PIC Environmental Services (PIC) was contracted by F.D. "Sandy" McHenry (property owner) to perform a Phase I Environmental Site Assessment (PESA) at undeveloped property located in San Dimas, California (see Figure 1). The purpose of this investigation was to determine if environmental impairments existed at the site. This document represents the PESA report prepared in accordance with customary industry practices and ASTM (2005) Standards.

The following sources were used to prepare this report:

1. Site inspection
2. California Regional Water Quality Control Board (RWQCB) records
3. California Department of Health Services (DHS), Site Mitigation Division records
4. United States Environmental Protection Agency (EPA) and Geological Society (USGS) records
5. California Department of Natural Resources (CDNR),  
Division of Oil and Gas (DOG) records
6. Los Angeles County Waste Discharge Systems records of active and inactive landfills
7. EDR collection of historic aerial photographs
8. County of Los Angeles UST permit records
9. Los Angeles County Title Records
10. Historic Telephone Directories

### **SCOPE OF INVESTIGATION**

The scope of this investigation included: site inspection, survey of adjacent properties, review of the above listed government records, review of historical aerial photographs, and geologic and hydrogeologic information search.

### **SITE INSPECTION**

On April 18 2007, PIC Registered Geologist, J. Tim Hersch, and PIC Project Manager, Ethan J. Hersch, conducted site inspections at the subject property and adjacent/nearby properties. Sandy McHenry, the property owner, assisted PIC with the inspections.

## **SITE DESCRIPTION**

The subject property includes about 80 acres of undeveloped property located west of Sycamore Canyon Road, north of Foothill Blvd., and east of Shuler Canyon in San Dimas, CA.

No historic addresses were identified for the subject property (see Appendix E). Mr. McHenry advised PIC that historic structures constructed onsite are limited to several livestock enclosures and a caretaker facility erected by Mr. McHenry within the last ten years (see Figure 2). The Los Angeles County Assessor Parcel Numbers are 8665-001-004 and 8665-001-005. Additional title information is attached as Appendix A.

Property boundaries are not clearly identified since adjoining parcels are undeveloped as well. Figure 7 is a recent aerial photograph with property boundaries indicated. Some dirt roads and trails provide access to the property especially in the northeast portion where a dirt road is used to access Sycamore Canyon Road. Historic property uses appear limited to livestock grazing. Figure 2 illustrates a group of livestock enclosures and caretaker facilities constructed in the northeast portion of the property since the mid-1990s.

All onsite structures were constructed after 1980. As a result, asbestos containing construction materials (ACM) are not present. PIC observed no obvious ACM, but testing for ACM in suspect building materials was not conducted. A reference diagram of common ACM in older commercial structures is illustrated on Figure 5.

## **SITE HISTORY**

Based on a review of regulatory records, County title records, historic telephone directories, historic topographic maps, and historic aerial photos, it appears the subject property has never been developed. Except for livestock enclosures and caretaker facilities constructed since the mid-1990s there is no evidence of historic usage. County file records document that Mr. and Mrs. McHenry purchased the property in early 1989. In 1998, PIC conducted percolation testing to facilitate construction of a leach field for the caretaker facility (see Appendix B). In 2005, PIC conducted potability testing of spring water onsite to verify acceptable drinking water criteria (see Appendix B). PIC's historic testing at the subject property confirmed a lack of environmental concerns or impairments. To summarize, the subject property has been used only for livestock grazing since the mid-1990s.

## **SURVEY OF ADJACENT PROPERTIES**

No significant developments were observed on adjoining properties.

None of the adjacent properties exhibited obvious evidence of petroleum or hazardous materials contamination problems.

Surface runoff at all surrounding properties appeared to be southwesterly toward a tributary (Shay Canyon) of San Dimas Wash (see Figure 1 and Appendix C).

No evidence of historic or improper waste disposal was observed by PIC.

## **HISTORICAL AERIAL PHOTOGRAPH REVIEW**

Historical aerial photographs provided by EDR were reviewed by PIC (see copies in Appendix D). Available photographs were dated 1928, 1938, 1949, 1952, 1968, 1977, 1989, 1994, 2002, and 2007.

All photos document vacant, undeveloped conditions at the subject property. Some dirt roads and trails are evident in portions of the site. The existing livestock enclosures and caretaker facilities are observed only on the 2002 and 2007 photos.

A recent (2007) photo has been enlarged and reproduced as Figure 7 for reference.

The aerial photo study indicates no obvious environmental impairments on the subject property or from adjacent properties. The aerial photo search did not indicate any historic oil well drilling or landfill activity on the site.

## **GOVERNMENT RECORDS REVIEW**

The following federal, state, and local public records and associated lists were searched to determine the potential for or existence of onsite and/or offsite unauthorized releases of hazardous materials (i.e., contamination) related to onsite and/or offsite aboveground or underground storage tanks, or any other potential sources:

All of the above records were examined for up to a one mile radius by EDR (see Appendix F). The subject property does not appear on any of the lists.

The EDR record search revealed that two (2) sites exist within a one-half mile radius of the subject property which have sustained soil and/or groundwater contamination as a result of an underground storage tank leak. Please refer to the Executive Summary in Appendix F for the Leaking Underground Storage Tanks (LUST) list. Both LUST sites are located at the San Dimas Canyon Golf Course which is located in a downgradient position relative to the subject property.

The EDR record search also revealed the following concerning properties located within a one mile radius of the subject site:

**Historic Oil and Gas Drilling Activity**

Based on a review of State Division of Oil and Gas (DOG) records, it appears that no historic oil production or exploratory oil well drilling activity has ever occurred on or within one mile of the subject site. Figure 4 illustrates historic oil well drilling activity near the subject property.

**Solid Waste Disposal Sites**

The Los Angeles County Solid Waste Management Department provides a public index of Solid Waste and Liquid Industrial Waste Disposal Sites (see Figure 6). The EDR Report in Appendix F also includes a review of listings concerning landfills. Figure 6 and the EDR report both indicate that no landfills have been located on or near the subject property.

It appears the subject property has not been impacted historically by landfill activity.

## **GEOLOGY AND HYDROGEOLOGY**

The elevation of the site is approximately 1400 feet above sea level. The surrounding topography generally slopes southwesterly toward San Dimas Wash (see Figure 1: Topographic Map and Appendix C). The subject property includes a tributary canyon of San Dimas Wash.

The groundwater contour map published by the Los Angeles County Department of Public Works indicates the area lacks significant groundwater resources due to shallow and surficial outcropping of impermeable volcanic and other strata (see Figure 3). Ephemeral fresh water springs are known to exist locally due to the impermeable nature of local lithology.

## **CONCLUSIONS AND RECOMMENDATIONS**

Based upon the results of this Phase I Environmental Assessment, PIC offers the following:

1. No documented, significant, historic occurrence of petroleum or hazardous materials contamination or environmental impairments was discovered at the subject property.
2. No significant potential onsite sources of petroleum or hazardous materials contamination were identified.
3. PIC concludes the site lacks environmental impairments (Recognized Environmental Concerns).
4. PIC recommends no additional investigation or action.

Dear Mr. McHenry:

**SUBJECT:** PERCOLATION TEST FOR PROPOSED LEACH FIELD  
Map Book 8665 Page O1 Parcels 004 & 005  
San Dimas, CA

### INTRODUCTION:

PIC Environmental Services (PIC) was contracted by Mr. Sandy McHenry, the property owner, to conduct a percolation test in the area of a proposed leach field located in parcels 004 & 005, San Dimas, California. The location of the site relative to surrounding streets and landmarks is shown on Figure 1; Site Location Map.

Percolation tests were performed in the area of the proposed leach field to evaluate soil capacity to dispose of sewage effluent for the proposed residential project. One test trench and one percolation test pit were excavated at locations shown on Figure 2. The test trench was excavated by backhoe to a maximum depth of 10 feet. The test trench was used to determine the potential presence of groundwater within a three foot depth zone below the bottom of the proposed leach field. The percolation test pit was excavated via a backhoe to a depth of 7.8 feet (94 inches) below existing ground surface. The soils encountered during excavation were logged and recorded by PIC registered geologist, Hamid Khorzani. The soils are classified in accordance with the Unified Soil Classification System (see attached Unified Soil Classification System). Detailed logs of the test pit and trench are presented on attached Boring Logs.

### Test Procedures

One percolation test was performed at the location of the proposed leach pit as shown on Figure 2; Site Location Map.

Prior to performing the percolation test, the bottom and sides of the trench were scratched to remove any smeared soil surface and to provide a natural soil interface into which water may percolate. After removing loose material from the test trench, approximately six (6) inches of gravel was placed at the bottom of the trench to protect the bottom from scouring and sediment.

The test trench was filled with clear water to a minimum depth of four feet above the gravel and left to soak overnight for pre-saturation and to allow the soil to swell. Percolation tests were conducted about twenty four (24) hours later after the water was first added to the trench. The trench was then filled to a depth of 18 inches above the bottom of the trench with clear water (12 inches above the top of gravel). Depth readings were recorded every 30 minutes for 4 hours to determine the percolation rate. The final 30 minute reading for the trench is the percolation rate for that period. Water was refilled to its initial level after each 30 minute reading. The results of this percolation test are summarized on the attached table "Report of Percolation Test."

**Conclusions and Recommendations:**

The results of field percolation tests indicate a percolation rate of 3.97 minutes per inch for the percolation test pit. Percolation rates exceeding 60 minutes per inch are considered unacceptable for use in disposal fields. As a result, the proposed area is suitable for a leach field.

The following design criteria for sewage disposal are provided for reference as minimum requirements.

<u>Parameter</u>	<u>Minimum Requirements</u>
Design Percolation Rate: (3.97 minutes/inch was measured)	60 minutes/inch or faster
Required Absorption Area:	330 square feet/bedroom
Leaching Area Needed:	660 square feet
Minimum Septic Tank Size:	750 gallons

In a case where the depth of filter material below the pipe exceeds the standard six inch depth, credit may be given for the added absorption area provided in deeper trenches with a resultant decrease in length of trench. The following table provides the percentage of length of standard absorption trench based on six inch increments of increase in depth of filter material.

**PERCENTAGE OF LENGTH OF STANDARD TRENCH**

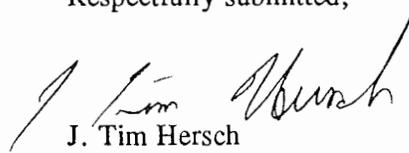

<i>Depth of Gravel Below Pipe in Inches</i>	<i>Trench Width</i>					
	<i>12"</i>	<i>18"</i>	<i>24"</i>	<i>36"</i>	<i>48"</i>	<i>60"</i>
12	75	78	80	83	86	89
18	60	64	66	71	75	79
24	50	54	57	62	66	70
30	43	47	50	55	60	64
36	37	41	44	50	54	58
42	33	37	40	45	50	54

Based upon the results of PIC's percolation test and trench sizing allowances in the above table, we recommend one trench measuring 3 feet wide, 7 feet deep (30" gravel below pipe, 6" surrounding and above pipe, 12" compacted soil above gravel), and 200 feet long, to be located south of the existing barn leading to the proposed bathroom house project.

The exact location of the sewage disposal system should consider set back requirements in accordance with Table I-1 of the Uniform Plumbing Code. A plot plan drawn to scale with proper dimensions, showing location of all proposed retaining walls, drainage channels, utility lines, paved areas, structures and property lines with relation to the private sewage disposal system should be prepared.

Should you have any questions or comments regarding the procedures or results outlined in this report, please don't hesitate to call us at 909/596-3355.

Respectfully submitted,

Dear Sandy;

Re: Potability Water Testing  
 McHenry Property  
 San Dimas, CA 91773

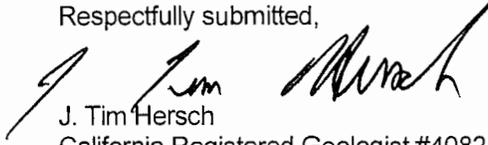

At your request, PIC Environmental Services (PIC) conducted analytical testing for potability of a water sample (W1) recovered from your San Dimas property. Attached laboratory results for sample W1 document that analyzed water successfully passed state and federal potability (drinkability) testing requirements. As a result, PIC concludes the water is suitable for human consumption. Specific testing results are summarized on the following table.

TABLE 1			
LABORATORY RESULTS

Copper	ND	mg/l = ppm	1.3
Other Toxic Metals	All = ND	mg/l = ppm	Variable
Volatile Organic Compounds (73)	All = ND	ug/l = ppb	Variable

Note: ND = None Detected

As summarized above, water sample W1 successfully measured all contaminants below drinking water requirements (MCLs). PIC concludes the water is suitable for human consumption
