Trash Enclosures

The City of San Dimas requires that all trash receptacles be enclosed in an aesthetically pleasing structure. There must be enough room to accommodate two trash bins (or the minimum required by the waste management plan). There must be a pedestrian entry and access for collection by garbage truck. The trash enclosure should be constructed of decorative masonry or approved equal. The height must sufficiently screen the trash receptacles but not exceed 6'-0". There must be a 6"x6" raised curb along the interior walls.

Landscaping on and around the trash enclosures is encouraged. Ivy and/or vines may be used on the walls or on trellises. The following figures illustrate the desired design. They are provided merely as guides and not intended to be the standard plan. Creativity in trash enclosure design is encouraged.
